

Figure 7: Post-treatment lateral cephalometric radiograph and analysis. Post-treatment cephalometric analysis showed overall improvement in maxillary and mandibular relationship (ANB= 2.3°), improved mandibular plane angle (FMA= 26.2°, SN-MP= 41.8°), correction of anterior open bite into ideal overjet, ideal overbite, improvement in the maxillary and mandibular incisor inclination (U1°-SN= 96.9°, IMPA= 80.2°, respectively) and enhanced soft tissue profile and lip position (Upper Lip to E-plane= 0.7 mm, Lower Lip to E-plane= 3,4 mm).
