

**Figure 7: Superimposition of pre- and post-treatment cephalometric tracings.** Cephalometric superimposition of pre-treatment (black tracing) and post-treatment (red tracing) on the anterior cranial base shows counter-clockwise rotation of the mandible and Class I jaw relation (A). Superimposition on the body of the maxilla shows maxillary incisor extrusion and maxillary molar intrusion (B). Superimposition based on the inferior-alveolar nerve and inner profile of the mandibular symphysis reveals mesialization of lower molar and uprighting incisor positions (C).
